Project Description

This is a web app created for a gaming company called Pixel Verse Studios used for creating and sharing characters for their MMORPG called FantasyRealm Online. You can register an account, create a character and share them for other people to see.

Login Credentials

There are three type of users for this web app, a user without any extra roles and permissions, a moderator user who has extra roles and permissions, and an admin user who is premade and can't be created by the web app who has all of the web app permissions. Here are the credentials for these three users to test out their workflows in this app.

User:

- Username: User
- Email: user@example.com
- Password: Userpassword!2

Moderator:

- Username: Moderator
- Email: moderator@example.com
- Password: Moderatorpassword!2

Admin:

- Username: Admin
- Email: admin@example.com
- Password: Adminpassword!2

Homepage

The homepage contains general info for the web app, a footer which contains links for the Terms of Service and Privacy Policy pages, and a navigation bar which contains the login/register links and shared characters page while the user is not logged in.

After logging in the navigation bar also contains a contact page, a user icon which contains a dropdown for the profile and settings pages and a logout button.

If the user contains a moderator or admin role, then they will also be able to see the dashboard link.

Characters

This page contains all the shared characters in the web app. Clicking on a character links to a detail page for all the character information along with comments. If logged in you can post and like comments, after creating a comment it will be visible only to the user who created it pending moderator/admin approval.

Profile

This page contains user information along with the created characters. In this page you can create new characters, duplicate existing ones, edit and delete them.

Settings

This page contains some settings for the user and the web app. Here you can change the appearance of the web app, change your user information and delete your account.

Dashboard

If you are logged in with a user with the moderator/admin role you can access the dashboard page.

In the dashboard page you can approve/delete characters, create/edit/delete/approve items, approve/delete comments, and delete users.

As an admin you can do all of the actions a moderator can do, but you can also create/edit moderator accounts and access contact and character edit logs.
